CRVM
COMPUTATIONAL RELATIVE VALUE MATRIX

Spread regressions

The indicated spread in each country is multiple−regressed against the same spread for all other countries, of which the 3 best independent variables are found. The regression standard error z score is plotted, for the current day and for 21 days of history

CRVM
COMPUTATIONAL RELATIVE VALUE MATRIX

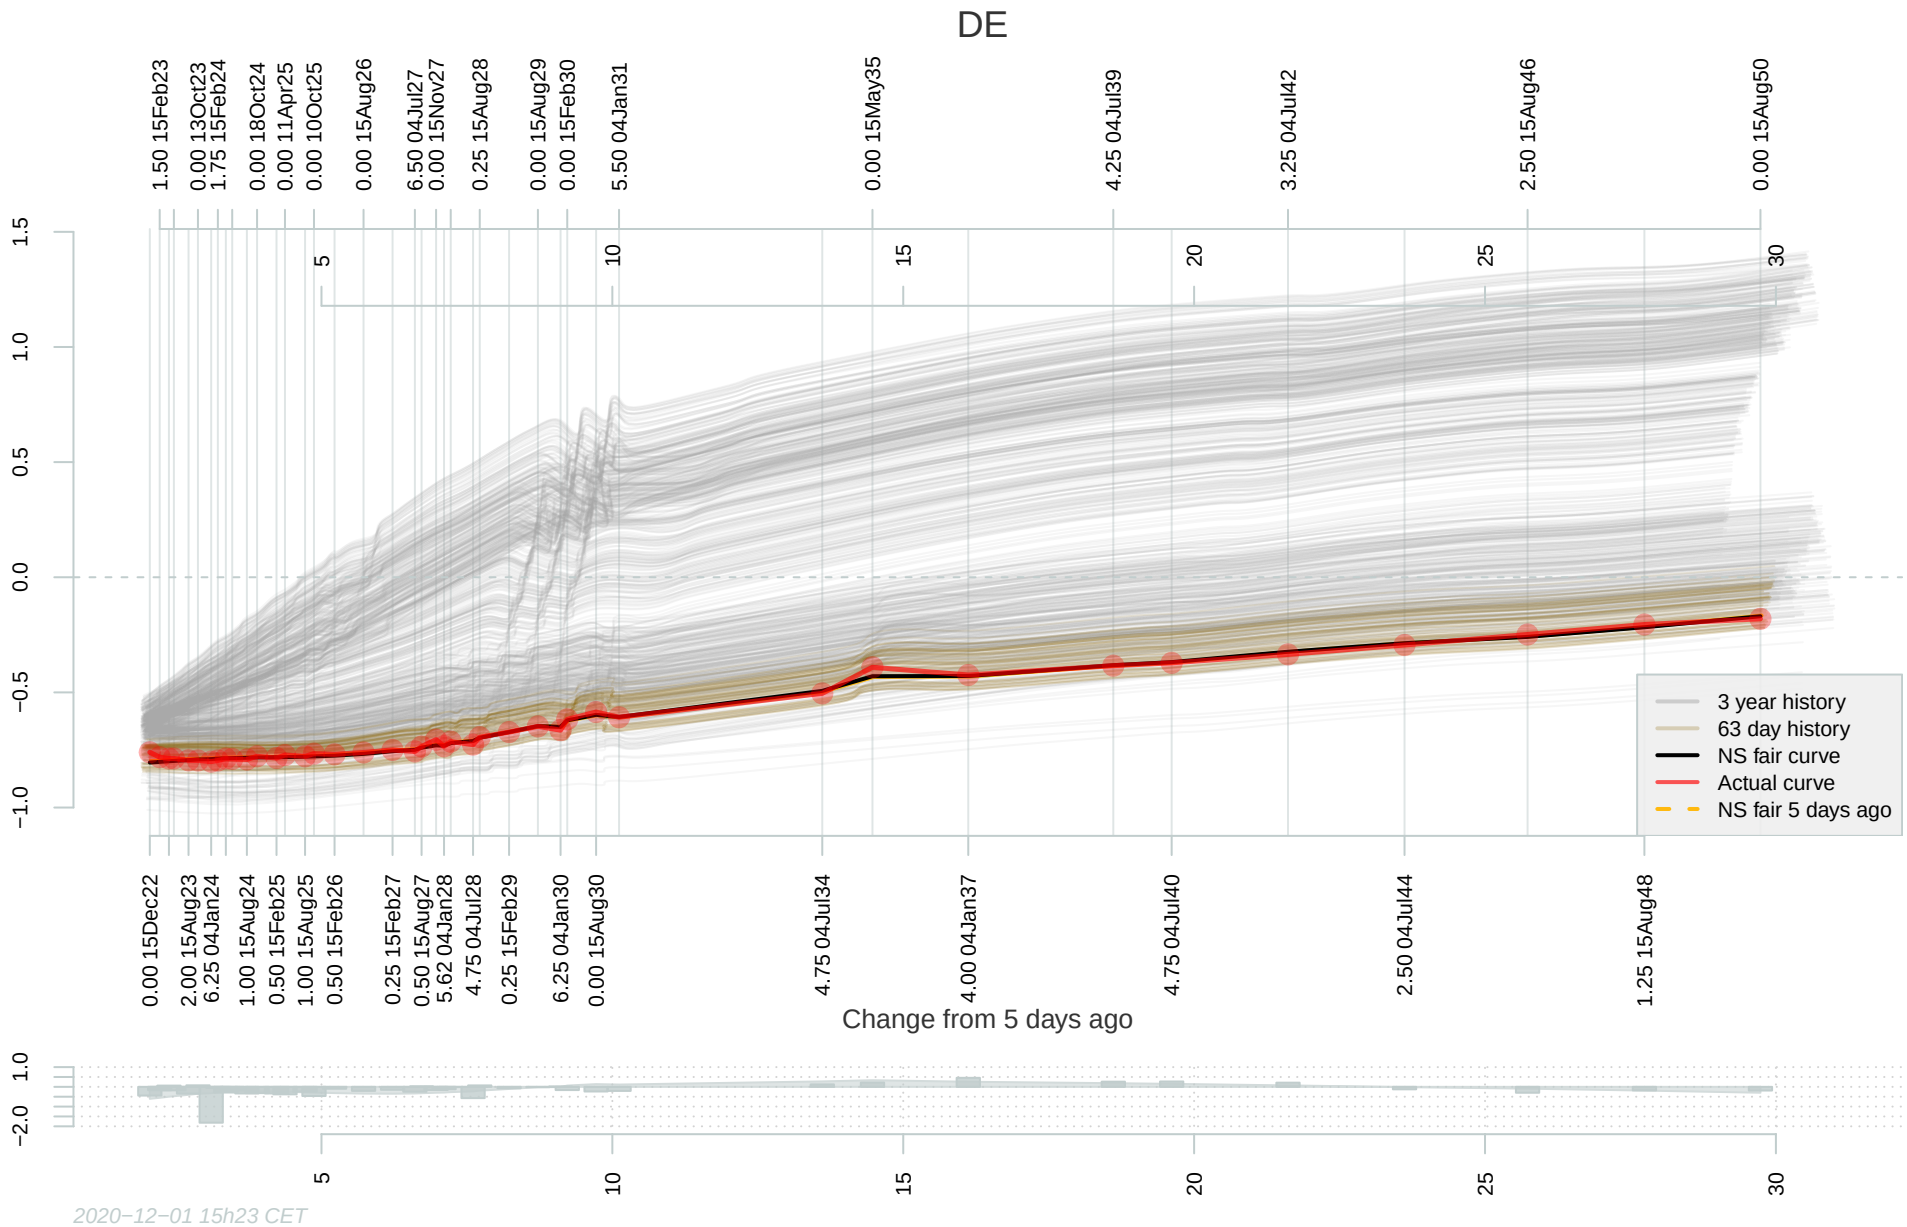
Country yield curve history

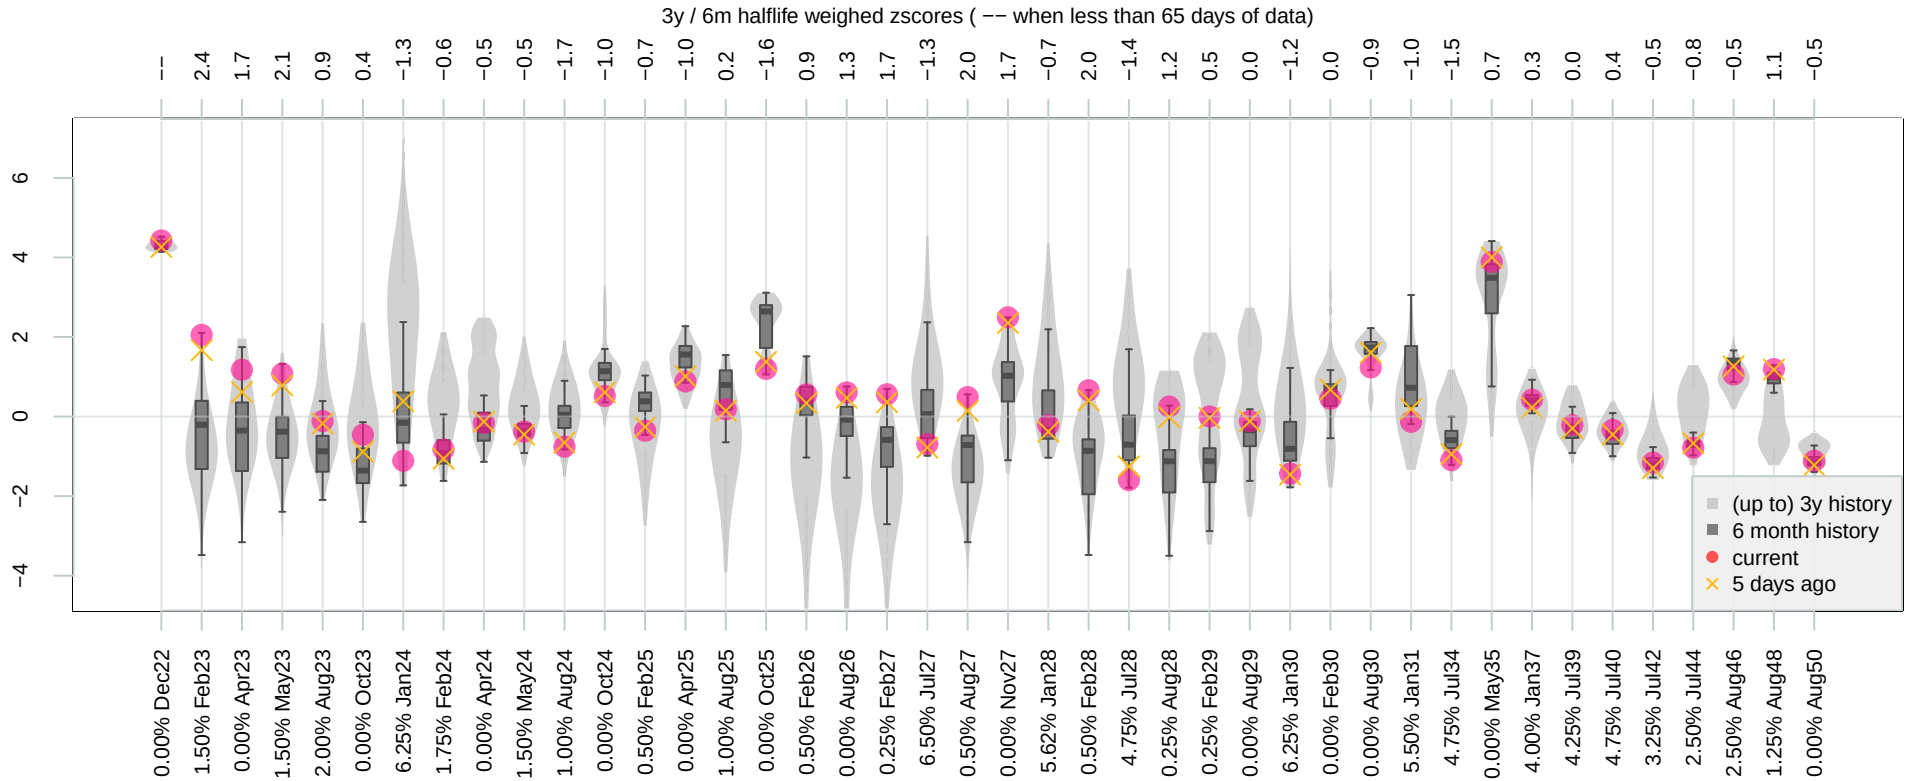
A 3 year graphical historic chart of the par yield curve



Cheap dear by instrument

Background violin plot of up to three years history
and foreground boxplot of past 6 months

DE cheap dear range



Change from 5 days ago

CRVM
COMPUTATIONAL RELATIVE VALUE MATRIX

Curve Sector cheap/dear

Curves are analysed for which sectors are cheap or dear within the context of the past 2 years of history
The analysis takes into account the major dynamics of the market, namely levels, slopes, spreads, and curvatures.
Individual bond idiosyncratic cheap dear is overlayed on the curve cheap dear with boxplots. White bars dotted and solid represent 1z and 2z respectively.
